### FISH SIZE:

From 200 g to 800 g  
based on 3 models

SEA BREAM

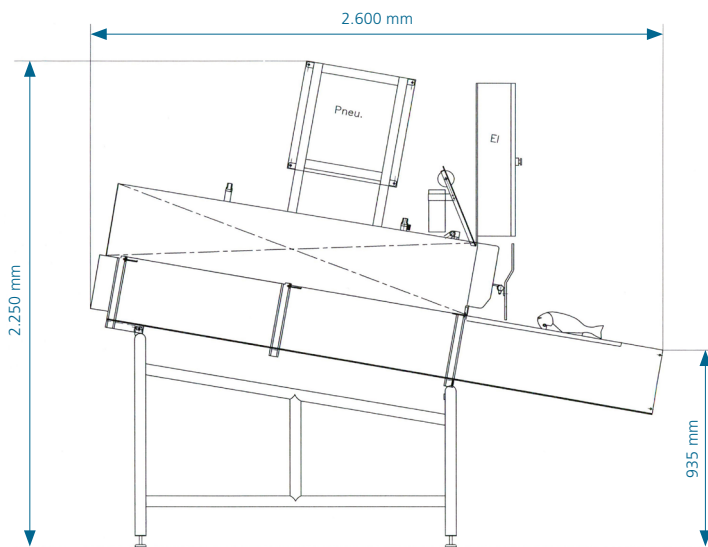

# Gutting Machine

## FOR SEA BREAM

The Boleto gutting machine for sea bream is the latest generation from boleto. It is built with the latest technology to meet the challenge of making gutting of sea bream possible. The machine measures, with laser technology, the height of the fish at the entrance and then through specially developed computer software calculates the machine what settings are optimal for each fish and the Boleto gutting machine automatically adjusts to each individual fish for ideal gutting.

The Boleto gutting machine for sea bream is developed through many years of study. We have studied closely how to carefully handle the fish without adding any fish damage by gutting. Also we have increased the fish weight tolerance for each basic model.

The machine has CE approval, and is equipped with all necessary safety guards and emergency switches to ensure maximum operator safety. Installation and testing carried out on site by Boleto.

Total machine width: 600mm

### TECHNICAL DATA

- **Compressed air:** Min. 6 bar
- **Air Compressor:** Min. 2,5 kW
- **Power:** 380 V, 50Hz (or other)
- **Water consump.:** 300 l/h, adjustable
- **Weight:** 400 kg
- **Material:** AISI 304 Stainless steel

### CAPACITY:

Up to 50 fish/min  
Adjustable speed

### FISH SIZE:

From 200 g to 800 g  
based on 3 models
